

**BLOW MOLDING TECHNOLOGY**

**REVAMPING**

# OVERENGINEERING, ABOUT US

**OverEngineering is specialized in the extrusion and blow molding sector and offers a comprehensive service, from consulting to the proactive resolution of any technical, mechanical or electrical problem linked to extrusion blow molding machines for the production of plastic containers.**

Founded in 2010, the company stands out on the market not only thanks to a top-notch team but also to a network of external collaborators and related companies capable of supporting large working volumes in times of maximum demand and also contributing with specific knowledge to the resolution of problems that require teamwork.

**OverEngineering is able to meet any requirement related to the blow molding and extrusion machine.**

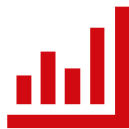

OverEngineering is also able to provide all the assistance required to implement everything that is outside of the machine itself and that makes up a complete line, from the filling of the produced containers up to palletizing.

**The innovative concept of a flexible structure, together with the careful management of undergoing projects, enables OverEngineering to feature “on time, on quality” interventions at competitive costs.**

## EXPERTISE

The years of work in this field have allowed us to develop skills, methods and solid partnerships, thus offering complete top-notch service today.

## PRESENCE

OverEngineering assists its customers to ensure full output for their machines thanks to a global, technological, fast and uninterrupted support service.

## NETWORK

Our network of highly specialized international collaborators allows us to always have the best solution for the customer's specific requirements.

# WE CREATE NEW VALUE

# NEW LIFE TO MACHINES

## REVAMPING

**Giving new life to plastic extrusion and blow molding machines is the service in which OverEngineering combines its multidisciplinary skills for excellent results.**

**Obsolete machines are brought to a level of performance equivalent to an original, new machine, if not higher, through the introduction of new technologies.**

### **A SINGLE SUPPLIER, FOR A COMPLETE SERVICE**

OverEngineering supports companies by first of all providing preliminary consultancy to evaluate feasibility and costs of intervention to transform an obsolete machine into a modern plastic extrusion and blow molding machine.

Every aspect, mechanical and electronic, is assessed by OverEngineering's team of experts, followed by the revamping or replacement of the individual components. If new technologies are available, modernization costs and benefits are evaluated together with the customer. OverEngineering also provides constant assistance on reconditioned machines, supporting the customer to ensure continuity of production and quality in production.

**Just a single  
reference  
company for  
all the  
solution in the  
blow molding  
Extrusion field**
